

**Sabrina Wallace Denial = DONE: [00:00:00]**

When I went out and taught my classes, the number one thing that people struggled with was biosensors. They didn't understand how anybody could have a biosensor in them.

They think they have to be injected. They think that they have to have an RFID tag put into them. They think that they have to sign up for an injection like a vaccine or whatever. None of that is true. Then the next set of folks are like, well, then they need a tower and. And then the next set of folks. Well, no, they've got to have a wearable and all this. Why do you believe all of that? There is a fundamental reason that everybody's brain goes there first, no matter who you are. You're like, what? No, you'd have to put an RFID in me or you'd have to this, that and all the rest. The biosensors are made out of your red blood cells, your peptides, your amino chains, your DNA. How is that possible? Is your body electrical? Yes or no? Yeah, but it's only my heart. What about your brain? Well, okay, fine. But nobody can see it. Here we are again. Is your body electrical? Yeah, but only my heart and my brain. No. How does Mom lift the car off? The toddler and her arms do not rip off of her body. How does that happen? Here we are again. Is the body electrical? So I have tried to teach people very clearly here two things. Number one, God is real. Number two, you have a body part. They have not let you talk about for 150 years out of 6000 years of this body part being here. It's always been it's part of humans. Where did it go? This requires thought. This requires analysis, not look. I just. I don't get it. No, no, no, no, no, no. You're an adult. You. Whoever you are, it is your job to understand. It is not my job to spank you. But they are your ignorance. Your lack of desire or will to understand means death. Because this is warfare, electronic warfare. This is not. We're going to come in and sing Kumbaya. We're going to meditate. We're going to just learn about our fractals. I'm a shaman. I'm into energy work. I'm going to heal. This is electronic warfare. And that's why I don't make friends, because I don't miss this bullshit with everyone the way they're used to all these years. Well, I don't get it. It's consciousness. It's. You know who? And everybody loves you. Click, Click. Oh, What happened? Oh, I don't know. I'm just too stupid. I should have sandwiches. I have no idea. Is the body electric, old man? I have no idea. I went to the hospital the other day after having a heart attack on almost that motherfucker. He came running at me with pads. Tried to electrocute me like the cops do when they shoot the tasers. They took it away for the purpose of surveillance from the inside out and they

have it. Or the documents I'm reading. You would not be there. What happened in Maui would not have just happened. Oh, here we are again. No, I'm a stay in now and that means my head's too thick. That can't be. Not me. Stop quoting your anger, your denial, and your inability to read on other people. Because I'm not just speaking for myself here. Obviously, I put myself out there. But the biggest thing that all of us are running into is friends, Mom's debts, whatever it can be. Can you read? It is as simple as college textbook. We've been dealing with this for a year and a half. People would rather be in denial. Now, can you tell me why that is? The question for the commenter that again, no picking on people. The sentiment of the comment is what I'm addressing. How could a handful of people control all the biology of the whole world? How could we be watching all the hurricanes and all the weather and have full weather control by 2025 for the Library of Congress? How is it that we know where the nuclear fallout is worldwide with the Department of Energy? How do we know where all the soil strata is in regards to all the agriculture that we do with smart seeding initiatives? And what did we do with all the original seeds before we switched off into GMO? Oh. Who's had responsibility for your health most of your life. You're your family, right? Because if you don't have five therapist, six physicians, and you're seeing doctors four or five times every year, there's something wrong with you. Okay, We all live like that. That's great. But I made a comment there. I said, Hey, just because it was always done this way, does that mean that it's right, especially given that the environment has changed? Could it have been four years ago? Why isn't there any resistance? Right. Karen Kingston went down there to sue sheriffs to tell them not to hand out the new COVID shots right in here. And I said that was stupid. But here comes because she doesn't understand the system like the targeted versus Garland. But here comes right now, right now on YouTube. Fox News. Don't comply. Okay. You didn't tell people, any of you out there, patriot stuff, whatever. You did not tell that you lied. And I don't want to hear it. I know damn well between the media doctor and all these people. Wide body area network, there's the vector of delivery. Being why our kids have to learn about it. The market share knows all about it. We'll be here all day because you will not fucking admit how these systems function. You don't want to hand in your remotes. Now, person who asked me that question you should be asking yourself right now if they've always known, which is what's required by the engineering, the hardware, the software for the reach. To answer your question of

how they're really doing it, which I did technically as well. But then the next thing here, critical thought should be, well, that's a lot of people that have to manage all those systems. I know isn't it, though? Do you realize how many young people are going into these jobs? You commenter should watch this sensor hunter operator recruiting video from four years ago and you should go Google and YouTube, Google Biosensors, then synthetic telepathy. Then Dr. Cody, the one at Walter Reed with Tech for Psych. Then maybe you will start to understand that to everybody else. Biophysics, biohacking, biomedical engineering, wireless tissue engineering, wireless drugging. That's what they do on the weekend. Biohacking with Python and Pi opening their garage door with their mind, starting their coffee pot with their mind eight years ago. How are they possibly controlling biology? Well, they've hired a lot of people who are not afraid to read it. That's something when we're not afraid to read, when we stop and step back and we're like, Hey, what is that? I want to know. No, no, no, no, no. You don't need to know. That's for somebody else, too. No, no, that's affecting my body. I just want to know, how does it work? And when people get nasty with you for wanting to know how it works, that's step one, red flag. Whoa, whoa. Now, all I've done is show people this is how it works. Do you notice what the resistance always is? Oh, that's impossible. My head's too thick. I don't understand. How could it be made out of me? Because your body is electrical and they lied to you about human anatomy. 6000 years of human anatomy did not change when crawling and Blavatsky said, Oh, yeah, nothing exists except what you can see. They hid it in private university. Private university. Pay for play. You want access to control people wirelessly the way the rows of Christians have been doing for years with the nano lipids. I give you a system to log into and a job to do. There'll be no law breaking for you. Never do whatever you want or always make it go away. Why? Because people would rather be in denial and keep their friends and practice conflict avoidance than be real about, Hey, I think you stole a body part. You didn't get a new technology. And that's the other component. Where did this tech come from? Where do all the testing for those biosensors come from? Scarpa. Tell me how. Same problem. Sorry. You don't get to know how it works. And that's why last Halloween 107 Justicia voter. David Nino. Mikey Adams. What did they tell you? Witchcraft. They said fear the witches. And I said, You better fear that motherfucker with a drop down on his cell

phone walking behind you at the grocery store, which is what we started seeing on videos. So you're ready to admit it yet that your body didn't change? Nothing changed. Except you figured out they lied. Okay, that's not my fault. And that's not the fault of whoever sent you to this channel. That is your fault. Because denial was more comfortable not dealing with it was easier. Until the drone is over, your home routing an Ebola signal through your body. Now all of a sudden, everybody is up on my channel one and Holy fuck. Wait a minute. That's a Oh, my God. That's the delivery system. Yeah, that's what I said. I said, Where's the telemetry for the human circulatory system? Where did it go? If it's a vaccine, it's not a vaccine. If it requires graphene. Graphene is utilized for data and bandwidth through skin and tissue with nanotechnology.

Metamaterials. What are you doing? Why don't you ask Professor Ian in 2013? No, no, no, no, no, no, no. I'd rather be in denial. My friends don't like talking about that. My friends would rather be over here talking about the Bible, talking about whatever the politics trumps here and the endless queue bullshit that gets you nowhere. Yeah, let's go talk about that some more. That way you spin in a circle. I got another sign for that. That's the cue movement. They protect the bankers. They protect the bankers. Go to Wikipedia. Oh, no, It's a big military sign up. We're going to come in at the last minute, kill off all the bad guys, and we're going to take over, put Trump in office. And I asked this morning, So once you do all that, I don't think I posted it. Once you do all that. NUNBERG That didn't happen the first time. So now you're going to do it a second time. The first time it turned into the Manhattan Project. Project Paperclip jobs. Yup. And what else? South America to go live down there and great. So it did not happen. Now you're telling everybody I'll do it again. That's right. You're going to not do a fucking thing to interrupt. Pentagon Directive 3,000.09 Lethal Autonomous weapons Statement. That's right, You're not. And that was the 2017. It's the police cyber physical backbone that requires not only all those biosensors that you cannot get out of you because they're made of your DNA and your tissue, but it requires your DNA. Propagating the signal that you don't even know is in there because all your life, you were told. Shock reserve before we move to the bio field is for mood rings and who fucking knows it doesn't exist? Well, your bro's went to work and cataloged your DNA and fucked with you from behind walls and gang stalking, which you also probably don't believe in. That's okay. You're calling it the wrong word. It's

called signature reduction force. Google fingers. Put that in wood for a fucking job and watch them flow. Good money. Yeah. Those are the guys in the white vans. Like the Finders cult. Oh, they got arrested. No, they didn't. You should probably go read about that, too. And then here's the. Oh, we got a big movie. We're going to do something. You're not doing shit. We have organ trafficking going on. We have problems with these electronic warfare systems that are not just for taking some planes, they're for civilian targeting. See, those discussions would have been helpful. But you killed people. Yeah. Where's Assange? This was his discussion. Whereas Edward Snowden, this was his discussion. Again, I worked with the hardware that monitored everybody. It was my job to put that prism box on the oc3 to the o c 24 on AT&T in Chicago. And everybody's data, it's that box clear and clean for the back end of the dissent. Now, I appreciate maybe you didn't have a job like that so for you you saw Snowden and wait. Nah, nah, nah. That guy's full of shit. He endangers everybody by talking about NSA's secrets. Now, how many years ago is that? Ten. Right. Okay, so now here we are. COVID has its own data center. COVID w band. Oh, yeah. So today I showed you the backend of why COVID has her own

wide body area network for for the i0t the Internet of Things. That's there. Right there. I showed it today. That is your reason why. Now, what are you going to do about it? Suspicious observers. Everybody seems to have mad respect for that guy as far as research in challenging Nassau and all that. In one of his recent videos, he said the last line of defense is your bio field, their electrical body part Well, fucking dot because it's affected by the human resonance and everything electrical that happens except for the people that remain in denial. Why? Why be in denial? They stole it. They hid it. It's not a new technology. They stole the body part, connected it to the cloud, handed out remotes to cartels, drug dealers, their friends, people at the State Department. And when those people wanted a girlfriend or boyfriend or people to shut the fuck up in a lawsuit, be done. Oh, it's just too hard. Well, that's how it works. Then I haul your ass over and over again, whoever you might be, that's bashing your head against the denial. And I'm like, I believe biomedical, wireless, tissue engineering.

It's right there, Like, it's right here. And we on this channel over and over, no matter how many documents you put out there, no matter what you say, the people around us, in our own families. Oh, I have no idea. And that's when we all learned the proper meaning of n d a I have a job. I'm not allowed to talk about that. Oh. It's electronic warfare, that civilian targeting.

It was so important to hide the body part and all knowledge of human anatomy and the material physics that we use. Einstein got to go out there and lie about gravity. Everybody knows in the physics world there's something fucking wrong with what they're saying as far as how we're handling high energy particle physics. Did you whoever you are. Did you notice the listing on that document for disease monitoring and surveillance? High energy particle physics. That's right. Like last year during Halloween. Oh, it's like there's an arms race for these equations of bio electro magnetic DNA algorithms. That's right. So when we ignore reality, we lie about human anatomy. We lie about what we do for a job every day. What happens when years go by until someone finally steps up and says, You're lying. We don't like them. We don't want conflict. Oh, welcome to the last four years of watching the Q movement burn it all down on the control downturn that was ordered. Here we are. And they're still doing it. Which is why I'm telling my channel the people that I care about do not get involved in this political bullshit. Watch. The movie is going to turn into horrible things and let's see, it doesn't. What? I would love to be wrong, but you haven't been able out there to break their calendar in 6000 years. I got a michael Syrian book. Fuck off. See, all of the sudden, here's the Great awakening. Okay, where is the body part? You want a lesser one? Where did you get your technology from for noninvasive and to two in three? Because remember, there was no satanic panic. Yeah. So where's the body part? The one that you're going to meet. Because where is the telemetry for electronic warfare? Everything happening right now on command and control in the military. Where is it? Yeah, there we go. I said invisible body part that you thought you didn't need to know. You didn't have to worry about that. It's fufu. It's cool. Who cares? Yeah. Now it's life and death. Good job making fun of people, huh? Do you think it's smart to hang out in denial, too? Now, do you understand? Any of you. Why am I, um. Why My trajectory moves? Because I try to stay very focused and firm. You got a deal. Okay. It's real. So we got a deal. But people do this. They're like, No, it can't. Oh, my gosh. That's what Hoover and Dulles and all of them were counting on. They're still counting on it now. And do you notice they're doing it? I'd rather be a patriot with my meager friends than admit the Widebody area network. Figure out how to deal with it. Deal with it. And then go after people that I know are dangerous because they're still lying about it. Which means somebody's got a

button somewhere. Yeah, I know. It's much easier to just stay comfortable.

Okay, well, those of us here on the channel, we will not be joining you because we know that comfortability is death after a while going along to get along, you're done to. Let's just. You.

[00:19:02][1142.1]

Unidentified: [00:19:06] So. That's right next door. That is next door. [00:19:06][0.0]
