

Psinerger Signage - Response to Zee Media & Dr Ana Mihalcea
<https://odysee.com/@psinerger:f/trim.6AFA5640-C519-40FE-993C-5BF36BB1A615:7>

Good morning, Doctor. Anna and Maria Zee!

God bless you. Thank you for publishing this. Today I'm going to post a link in this very short video to say thank you. I'm busy at the moment taking notes and adjusting some of my signs to go right in tandem using the same bi-directional telemetry of the biosensors. So when I present some of my data on the neuromorphic and fluidic biosensors. They communicate with our proprietary applications. It will make more sense. In the meantime, synergies. Listen to this. My company history just proved what I am going to show you a little bit later. But this is what I want you to see, it was clearly technology. You can see the blue emission, the green, all these different things. And when you see that, that the blood is being transformed. So when Dr Ana says that this is obviously self-aware, it knows what it's doing, think about the fact that, firstly, we shouldn't have flashing lights in our blood. Secondly, this is going and using the blood to create. So they've found a way. Correct me if I'm wrong, to use the blood to create synthetic structures. That's this and that, if I'm not mistaken, Doctor, and it correlates with your previous finding. When you looked at the blood and you said to me, this is literally draining the life force out of individuals, something's happening to the energy of people. It would make perfect sense if this was going in and replacing the blood of people who were killing, killing them and forming these structures to replace the blood. Life is in the blood. Absolutely. I totally agree with you. And I think that's what I filmed and showed. So here you see another example of you. Excuse me. Right, right. Went for biscuits. Mm hmm. Do you think, now that they're blinking under the microscope, that they might want to know that they're connected to the same internet as their phone? To be able to do things. Like get on. Yeah, yeah. Yes. To do things like this. This is from December 2021, a caller to the American Journal. And he said nanobarcode, luciferase, cytotoxic agents. Here's all the stuff that's in it. What have the politicians told you? They told you to stick your arm out. Don't ask what's in it. And the pharmacist pulled out a blank insert. And most recently in North Carolina with Dr Lindsay and the North Carolina senators, they said, and by they I mean Pfizer. You can find out what is in that syringe 70 years from now. So Google fingers, go ahead and look it up. Internet of things, wireless body area, networked body area network. Wench biscuits. Your job is to sit there and repeat this until it comes true. Click your heels while you're at it. Maybe wave a magic wand in the air. Or you could sit in the pew and stare straight ahead and continue to pretend that they never do. When in fact they are French biscuits. They already have. Everything you see here on my hyperbolic Sabrina's sign is correct, including the Schumann Resonance Golden Ratio Disrupting Bioelectrical Decoupling. Right there. Right there. Pardon my chipped nail from painting and cleaning

my own house. Right there. And what are Sabrina's hyperbolic, exaggerated statements that none of the wench biscuits could handle? Sabrina, why do you pick on people? Because I don't want any more old women clinging to fear. Stand up. Grow up and admit what's happening. People work for it and kids go to college for it. If you didn't know, you definitely do now. They use video game controllers to play real people like Sims. It's a video game that has given jobs and pensions to the guys in the white vans. That's the signature reduction force they're rooting around in people's veins and arteries in real time. Yes, because that's how modular open system architecture and sensors, open system, excuse me, modular open system approach and sensors, open systems, architecture and OCR. That's how the biosensor systems work with the design at the Pentagon. Your body is the weapon. No tower or nano required. Because photons are generated within you, you create them and then they propagate out in the wave of your DNA. It's kind of important that when people come in front of you and you give them your time and energy, you can't pay them. You cannot donate to me. Please do not email me unless you feel you have to. It's very important that if you're going to accuse people of being exaggerated, you can prove it these days. Very important. OK. You play people like Sims with video game controllers, rooting around with sensors, open systems, command and control architecture, using services and systems like the I Tripoli. Sure. There are computer network protocols, five of them, with multiple algorithms and mathematical schemes for manoeuvring the electromagnetic fields of the human body. This did not appear yesterday. This EEG headset is from 2012. Cognitive threat warfare, technology and the ability to do laparoscopic surgery from a drone over your house. What I'm showing you is the Synergy Tech Metric PDF. You can find it with the Robin Williams JPEG all over our channel. It's free. It's a collection of industry technical documents. Of computer networking through the human body. We do not just fire off a single frequency. We do not use one type of access or two-way telemetry. It's not a vaccine if it requires graphene, because that's for synthetic biology. Every single information, professional information technology, professional and radio frequency person who continues to gaslight you telling you there is no wireless spotty area network. This is three 1 to 3 layers of network security intra-band with your body control unit, maybe the phone, maybe your router and then extra band out to the world. You want to start. Hold people. Hold them accountable. You have to start with your own friends, neighbours and family. If you are in information technology, if you are in radio frequency, what are you doing? lying and gaslighting to death? Your own family? About 802.15. And all the different ways we use the human electrical homeostasis. Not just to route data, but to fire electronic signals to alter their electrical physiology, their biochemistry. Why are you lying about the human aura? Information, surveillance and reconnaissance, and you've been getting away with it for 150 years. Everybody just pretends they're too stupid. To know that it's a body part

and not something imaginary. Somebody made it up. So as long as you keep doing that, we keep fighting with people who are doctors and people like me who have survived. You and I made a PTF and I said, 1995, buddy, three network wireless buddy, are you network technical writing, Federal Communications Commission, Medical Body Area Network already mandated everything. Don, how is that possible if this is all some kind of conspiracy? It isn't. You're gaslighting. You. Right now. This is from 2013. This is the I Tripoli. Again, it's your new doctors with something called biomedical wireless tissue engineering. This is from 2013 from the I Tripoli of our life sciences for your new smart city agenda. Because it's not an agenda. It's already an agenda. Here ten years ago. When we gaslight our jobs in engineering. That's not good. Because that means it already exists. And just because you've just found out about it doesn't mean you've just found out about it. Great. Someone has a job. Ten years ago, five years ago and now. And they know all the things I'm showing you and more. So if you're angry that you already have all these sensors. Well, don't take it out on me. I've been giving you the solution for a year and a half, and I've made a PDF and I've been telling the truth. And then I put up with everyone making fun of me, and I put up with the constant attacks, electrical, physical and otherwise. And why? So that I could come out here and tell people that there are people out there who have valuable information. Please go and find them and tell people, let God intervene and God bless you. Toria Tori says for trying to help people. Amy: Most important. Sorry if I got out of order. I bring up Tori because HIV made in a lab by Fouchier to disable the immune system played on the Tori says show on 24 July 2023 at 20 minutes and 12 seconds I had a two and a half hours HIV made in a lab by Fauci to disable the immune system and then they handed out AZT to kill people. It wasn't to kill people, it was to test an internal ingestible biosensor type of telemetry. And when I was working at IBM, I found a big ass computer underground connected to a low earth orbit satellite that was monitoring the wireless body area network. And because of how old I was at the time, I thought, 'What am I looking at? This isn't possible. Fast forward to today. And I said, "Oh my God, that's the wireless body area network. Is that the near field effect? And I said, "Why are you telling people this? You know what they said? Why are you mad? And I'm like, "Oh, because I've been lifelong. I was told the aura was stupid and woo woo and I had really bad things happen to me because I happened to be able to do something. I'll show you in a second. It's a natural reaction of the body parts. What the hell is all this? It's been a body part for 6000 years or whatever. 150 years ago. I don't know. Body part. OK, but if there's no body part, then chiropractic and acupressure wouldn't work. Duh. And it does because it changes the physical pressure, just like the biophysicist does. Right. I don't get it. Because you don't know. You put the cloud on Wikipedia 28 years ago. Now do me a favour. Go find yourself a woman biscuit. One of those old women who screamed and yelled and sat and said none of this is possible. It's all a demon feeling. There's no

such thing as radio frequency through the body. Go and take your frustration and anger out on them. They've been hanging around with the Tory community here around the Synergy Channel and Synergies, complaining and whining endlessly about how none of this is real. Then they went under their farm of people who have been lying for the last two years. They had hundreds of thousands of eyes and ears and they just said, "Oh, no, we can't read minds. No, no, no. I don't know what you're talking about. I'm sitting here going, "This is 28 years old technology, and biosensors are 18 years old in the commercial world. What are you doing? Huh? Good question. Exactly. You could take it out on them for whatever reason. If they couldn't handle it, they didn't want to know. I don't really care. But if you're angry, go and take it out on them. Because here on this channel we have been telling the truth very clearly from the beginning. No fucking around. For those of you who got angry, you only did what you said because you didn't want to. Go and look in the mirror. That's the person you need to be mad at. Why didn't you want to admit it was a body part? Yes. Your business, not mine. So don't take your emotional whatever out on me. The disabled lady who survived non-invasive ventilation got off her ass and made a PDF for solutions. The Wide Body Area Network, excuse me. The 802.15.6 wide area wireless network. The International Standards Group for Electrical and Electronics Engineers is the National Institute of Health's biofuel at the moment. Google Fingers, biofuels. National Institute of Health. It is a part of the human body. We used to call it the aura. Now we call it the body area network. A long time ago we had dial-up. We had to go to cable modems and fibre, so we had faster throughput. In 2017, we built a cyber-physical backbone. Why? Because body area networks have been around since 1995. Now, right now, they don't have a vaccine if they need graphene, because they've been sucking around since 1995. Now they have a cyber-physical backbone. And so in 2019, you need to go get injected with graphene to enable faster wireless body area network, more data through the wireless body area network for the smart city initiatives. Now, synergies here on the channel, this is not the first time they've heard all this because they know that your human immune system, that 5G and everything they've been after is invisible and wireless and 80% of your immune system is this biofield, which is also responsible for 40 to 60% of your endocrine system. Your hormones. Oh my God, how do we know which organs make up the immune system? According to the Children's Hospital of Philadelphia. The important organs and tissues are the thymus, the bone marrow, your lymph nodes, your blood vessels, your spleen and your skin. Welcome back to your BioShield. Wouldn't it have been nice if a woman biscuit had admitted that this stuff had been sitting there for 20 years? Five. And one more thing, you'll notice, and I'll notice as I go through my science in silence, without the fan on, have you noticed how these signs haven't changed? If you go over the bright line from last year, you'll see that the signs haven't changed. I've updated some of them with quantum math and more McAdoo stuff. But when it comes to

synthetic biology, you're going to want to take a look at a lady called Celeste Sloane, or Salem, excuse me. And she has, I think, the best overview of synthetic biology, the things that you can understand. And she's got a phenomenal glossary, and you should definitely make sure that you know about synthetic biology, because it's not going away, as evidenced by the fact that you're listening to me because of the following La Quinta. La Coloma has been on stage for three years now talking about what we're looking at in this presentation by Marisa and Dr Anna, the La Quinta La Colonia people.

They've already found this, they've shown it on stage and they've been told by three different countries, we're Dafa, we do what we do, we're done with you. They're still putting out data, but they're in a different place somehow, more so where I am, because we're putting this right in your face with spectroscopy in a variety of ways, not just blood. We also have our infrared and Teledyne Flora and it doesn't matter. Nobody wants to admit that these are jobs and they are jobs. Proteomics and transcriptomes. What is proteomics? Google Fingers and what's a transcriptome? Well, that's for our good friend Bill, the brain imaging library, using those bad Barse biofield analysis devices with your body area network talking to an artificial intelligence, an SSA. Why? See, this is the problem. This is how it works. But we've so dumbed everyone down that they don't know. And when you talk to them, if you don't talk to them like they're two years old, they stop thinking. And that's because of the veneer. They look at you and they say, "Are you wearing a suit and tie? And you look like a teacher, right? And then they listen, but they do not remember. That's our audience. The education system. Here in the States. It's modelled on our prison system, more uncomfortable. Academic. Factual. Data. So how did we get here? Quantum computing underground using bio-photonics. Now you're going to tell me that doesn't exist. Then tell me we haven't given the guys in the white vans jobs with the Signature Reduction Force. Google fingers. At the moment, the jobs are still there. And the guys in the white vans, the Finder's Cult, remember they were game callers. They send the children and they look through the children's eyeballs. Darva, where did your non-invasive N3 come from? Non-invasive, you mean with the Delgado and von Neumann research? Could you please tell me how that was done? So they told La Quinta La Colonia Derp that they did it. We don't talk about that. Here we are. It's 11 October 2023. We're going to hear the same thing again about blood spectroscopy or microscopy, and I'm going to pick up the same sign that I drew about our emergency alert system with distributed access architecture. Here's your house, here's your neighbours, here's the headend at your cable company, which has a physical box in it that broadcasts the emergency alert system directly to your house over fibre on internet protocol networks. Because that's how it works. And they told you? Oh, no, no, no. Just cover your phone while we're looking for your phone. That is not correct in terms of cybersecurity or the physical layout of the device's manual. What did your 5G experts tell you? Bullshit. Show me

cybersecurity for the 6G personal area network. I'll show you. Here's wireless spotty area network to radio frequency syncs using biosensors ATO 2.15.4 and ad hoc vehicular machine to machine autonomous language only communicate on a mesh network eight or 2.15.5 wireless sensor networks. Welcome to Computer Networking through the Human Body. My name is Sabrina Wallace. I'm 44 years old and permanently disabled. Since 2004 I have had a very high profile job at the back end of NORTHCOM, and I really did work for the lovely Unite, or excuse me, University of Wisconsin Whitewater. And this is my coffee stained resume with some of the software that I was familiar with at the time that I was working. The job synergy dot com is me. You can do a Who am I still? Why am I here? Because I was disabled almost 20 years ago so that they could continue to do horrible tests on me. And I'm very aware that Software Defined Networking is why they do that. Why do I know this? Because I can explain to you who is using these systems with this cute little headset and how via internet protocol networks, your basic internet, your phone and the same triple working groups as your phone, all these different systems are using internet protocol networks, net centric warfare to hunt you down through this body part, your bio field. Because that biofield is a node on an internet protocol network accessible to all these people who pay money for database access to your body for information, surveillance and reconnaissance. It's called Applied Signals Technology with High Accuracy Detection Exploitation System for ISR. So Somoza and OSR and all of you out there are used to lying for security and other reasons. But we're at a point now with synthetic biology and transhumanism where people need to understand that it's their body that's connected to the cloud, not their phone. What am I showing you? Osiris The 5G programme to access the metamaterials of the sky. It's not a vaccine if it requires graphene, because since 2005, every little nerd who could program Zigbee and Bluetooth for virtual light communication, mesh networking or our new way of communicating with free space optics knew all about the biosensors, every software developer who had to write applications in Python to open their garage door knew about the biosensors commercially available for testing and deployment on YouTube. Right now you can go and watch all these young nerds opening the garage door with their minds starting their coffee pot because it's an industry and it's not food because there's no woo woo. They have these industries, they have market share. It's serious. Synthetic biology goes off in academia in 2008 and everybody wants it on the new synthetic telepathy, not to mention all the fun stuff with anti-aging, immortality, research, life extension, Henry Generative medicine. What have you been told? Even as recently as a few weeks ago by pharmaceutical executives, supposedly? They said we can't read your mind. Now we have skin tonics. Bioelectronics electroceuticals designer drugs with AI precision health care. If you didn't have a brain dead brain and you didn't have synchronous symbiosis already installed in your left hemisphere or by electroceuticals skin tonics in 2019, there

are little dial up connections between themselves were not enough. You needed the backbone of everyone else in the world to be grafted on, you needed to accelerate the metamaterials, because that's how the 60 works with metamaterials and graphene and wearables and synthetic telepathy. You didn't let anyone use their natural body part. You hooked it up to the cloud like you're breathing, killing a bunch of people with the RIF machine Healing Touch, an ongoing journal of the American Medical Association to embarrass the nurses and doctors who found it therapeutic touch with valuable laboratory technical data that just blew in the wind. Aaron Schwartz shows up at MIT and says, hey, you have to share how easy it is to hack people with this Alice Fear Neuron Journal. And on and on and on. And he's dead. Not long after that, Barnaby Jack shows up and says it's easier to hack a person than a car. He was the Jack Potter who showed all the black cats how to spit money out of an ATM. Died in his bed. Oh, it's always your fault. And these electronic warfare systems have been around since the fifties. That's what everyone's so afraid of, because it uses bio-photonics. We don't electrocute you from the outside, like the light our people lie to you about. They keep telling you that you can block the signal. Oh, my God. Well, the signals come through photonics. How do we do that? I'm so glad you asked. From the National Institute of Science and Technology, where we don't pay 30 grand for a toilet seat. We use what, bio-photonic tools. And so in tissue diagnostics. Yes. In 2007. My goodness, how? Google finger optical coherence tomography. Just starting to look at your DNA to make a change with our good friend Bill. The Brain Imaging Library on human body communication medical implant communication systems of industrial scientific and radio frequency bands for medical aid and what they tell you. Uh huh. So we have polaritons, little tunable miniature electronic antennas with the 16 metamaterials. And that's courtesy of one of you. Adam Thick graphene for low-power human body communications at the physical computer networking layer for baseband transceivers in your eye. Tripoli 802.15.6 wireless body area network. Do you remember what it looks like when they do that, when they are just transmitting through your bloodstream? Remember the picture I showed you of a young nerd with a bunch of computer monitors in front of him and a headset on? There's a drone operator recruitment video here on the channel. Go find it. What I'm telling you is absolutely technically accurate and realistic. This is from 2012. So it's safe to show you and you want to see how they do it. Now go watch the recruitment video. Then you can go to YouTube for similar videos. So metamaterials are materials that do not exist in nature. They are supposed to manipulate electromagnetic waves with black, absorb, amplify and bend the wave. They also have the ability to steer, absorb, polarise, split, change phase focus, customise the electromagnetic wave at its inputs and outputs and frequency filter. Now, for me, I don't want any of that. I am a deep, non-invasive end to end survivor covered in physical scars. So what I typed into the synergies was block shock, shunt and shield the Lord rebuke the Amen.

Get out of my bio field starting here with block absorbed enhance when it goes to bend the wave to access the further programming inside the nanotechnology. That's when I call in Jesus Christ, because I call him in immediately and I call him in at the end. Now wait a minute. It's just those of you who have problems with religious stuff, because that's what I'm going to call it for now. For now. For me this is my faith. I really believe in God. It's not something where I sit in a pew and stare and find a book somewhere and get told what to do. I've seen God physically myself. My experiences are my own. I respect yours and I ask you to respect mine. So if God is not your way, I call you a prayerful person, or you can leave it out if you want. But for me the Lord's rebuke, the Amen, is important. And to other people of other faiths, put your faith in it. That's real. OK, now, or if you're an atheist, leave it out. But block shock, shunt and shield the Lord. The rebuke to get out of my bio-field is to disrupt these nano-materials with something called the Sign Medic's power of sound or kinetics or piezoelectric. Because I use my own body part for myself. I don't need a wearable, I don't need to meditate for 20 minutes. And again, I'm going to show you this in a second. So in conclusion, we are harvesting energy from the human body, radio frequency and all sorts of things. This is your new green energy, Soylent Green. The new energy is you as you move, as you breathe, leakage of radio frequency because it runs through human beings all the time. We have disconnected the electrical field. I recommend Stephan Burns on YouTube to read all about how we're supposed to be naturally grounded with the Schumann resonance in the earth. But they are decoupling this cell state with Dr Mike 11 at Tufts University for synthetic biology, for life extension and regenerative medicine with biomedical engineering, wireless tissue engineering. I am tired of being called all your names. Thank you. To those of you who defended me on the bit. Shoot. Thank you to those of you who defended me in the rumble. And thank you to those of you who held back the biscuits so that people could learn about the real systems currently in use. Thank you, La Quinta, La Colonia, for all the hard work you've done, and God bless you, Dr Anna and Maria Z, for all the hard work you've done and are still doing out there. La Quinta, alumna and others in closing. Is it a body part or is it the plaything of our surveillance state? Because if it's a body part, then no one is allowed to say anything real about the mathematics of how our physiology and our human anatomy and our material physical environment works. If it's a toy of the surveillance state, then people like Malfoy, who have been lying with their body sticks all along, are lying about their own business. This is medical, industrial and scientific radio frequency band four, satellite 2.4 terahertz low power. We used to have the medical implant communication system, installing RFID and humans in the 5060s and 70s, and then we went to EEG. Brain-computer overlay, DNA, steganography kind of monitoring through your bloodstream. For this reason, even this year, in March 2023, the body and I deny the target individual Havana anything. Even if you're from our Signal Corps,

Signal Intelligence Corps, you're going to have a mass hallucination, which is always the answer when someone is harmed by these systems. Why is that? Because they are soft kill weapon systems. Excuse my shoulder. So if we as human beings continue to sit here and not tell the truth about what people are teaching our youth to go and work for an emerging technology. This is a college textbook. It is not a Harry Potter grimoire. This is what our children go to school for. A recruitment video to learn how to do this. And you're still telling them the aura is fake. We're not wireless. They have no idea what their job is or how it works physically, mathematically. But they have to do what you say because you're smarter than they are. Welcome to the mouse revolution I think is coming to the United States. So where's your body part? It's one thing to say it. But you have to show people, right? Show me. So two things. Because this is what got me into trouble. The two things I'm going to show you. I said, this is a college textbook on immersion technology with human computer interaction. I said what he said.

And then I turned to Page and said. Human and machine Human and machine trust considerations around autonomous weapons systems that are lethal. Uh huh. And then I turned the page again and it said on page six: Just as military personnel must develop and maintain trust in laws, trust in lethal autonomous weapons systems must be established and maintained throughout the life cycle of the law. That is, through design, development, deployment, sustainment and upgrades. Interestingly, Department of Defense Directive 3000 zero nine does not refer to positive outcomes as a design criterion. DOD D 3,000.9 defines the goal of autonomous systems as avoiding negative outcomes, unintended engagement, or loss of control. The lack of reference to a positive outcome for lethal autonomous weapons in the DOD directive could be a weakness in the directive and should be revised to emphasise the intent of the administration to ensure the weapon system performs as designed. More importantly, the military will need to consider the impact on confidence if lethal autonomous weapons systems do not perform as designed, or if there is an unintended engagement or loss of control. In other words, when a lethal autonomous weapon system does not perform as designed, it breaks trust by highlighting the unique trust considerations, concerns and constraints between the military person and the lethal autonomous weapon system. The DOD will be in a better position to provide guidance on the use of these systems. And I asked about trust in artificial intelligence. 2021 explains in clear language the revolutionary challenge of artificial intelligence and why trust is so important. I'll try not to bite my lip again. OK. Literacy matters. So do the references in the book to tell you what. I underlined it for you.

Google Fingers. These are my hair follicles. This is my arm.

This is my body. Shield. Elongated. No attachments.

Trust me. Oxygen and a lifetime of practice. Now. It's really appreciated. All of you out there. If you could, check out this amazing compilation by Dr Anna and Mary Izzie. And. No more woman biscuits. When you talk to people, you're talking to people who are too

old to be interested at any age. This is drone warfare on CONUS in a joke. This is pay for play electrocution from the inside out. You can buy a database of a person to torture them electronically, but you cannot pay for the databases. If you have hands, they can occasionally protect you. But if a brute-force hacker gets past certain satellite systems, or more importantly, they'll see how close they can get to you by pulling your DNA out of the trash can. A lot of these systems are commercial off the shelf, and with the advent of the new graphene, it's pure hell, because even before they were able to use the biosensors with their bi-directional telemetry to hack another human being, they still had a lot to do with galvanic energy, where all they have to do is reach out with the nano wearable and reach right into your bio-field and make a change. It is all too complicated. We have legitimate bio-labs that have proprietary software applications written specifically for certain biosensors and air molecules. Friedberg atomic fenestration acuity within the sphere mapped for liminal spaces, human teleportation and DN Sphere Math Graph, Text Protocol or No Graph Transfer Protocol. Pardon my acronym, Memory. And that has to do with nano-constellations where people have been brainwashed into thinking they are aliens. And aliens are Turians, whatever. When I lived in Las Vegas for seven years, my kids were on Game TV, and one of the episodes throughout my time in Wisconsin, and I've only found out about all this in the last few years on the electronic warfare side because my family sold equipment, but I didn't know that. And D-Wave chairs, universal remotes, other frequency equipment before they went into computers or brain computer interface. And as I continued to find out how easy it was to access these systems, I will come back with my brain computer interface presentation and I will show three different versions, including five Leon and Medusa of the applications that are commercially available right now. And then just like the police in Australia who are pointing their mobile phones at people, you could do the same thing. And then I will talk about the biosensors that are involved in the new plasma blueprints for synthetic biology. Dr Michael Levin Working with real transhumanism and the effect of, hey, I'm going to grow a tail tomorrow. And as far as uploading your mind completely to the cloud, they are racing exponentially ahead of that with neuro-liquid neurons and neuromorphic chipsets that people don't understand yet because we live in a plasma-based material physics environment. In other words, folks, there's a lot of educational catching up to be done. No more gaslighting. When somebody looks at you and says we can't read your thoughts, we're way beyond thoughts. We are down to the bone marrow in your bloodstream. And if they continue to argue with you, you need to send them to the Lawfare of the Kill Box, the Global Information Grid, and the Net Centric Network Killing article from Computer Weekly from 2014 that is here on the channel. They need to be educated. You need to stop believing in Illuminati hand signals and start believing in the I Tripoli wireless buddy area network eight or 2.15.6 using intelligent cluster based routing protocols through your body.

Industrial systems need to be mandatory. Boeing and Raytheon would be broke if you could just take off your wearable or put down your phone. Take off your wearable or put your phone in a Faraday cage. The levels of shielding required for these systems are intense multi-vector, multi-path access. These are bio-frequency weapon networks, sliced. And dampened. To your DNA, your bloodstream, the way you sit, how often you breathe. Your primary biosensor data has been running on the respiratory, the... Including your movements since Pokémon Go. I appreciate those of you who continue to be confused, which is why I'm begging the rest of you in I.T. Please tell the truth. Stop gaslighting people about 5G. And God bless you out there. Thank you for your time and consideration today. Oh, now I'm going to pray. So thank you. And I'm going to stay. God bless you.
