

[00:00:00] Sabrina Wallace:

It's not a rabbit hole. It's a body part.

If you haven't figured it out yet, the human aura is not fufu and woo woo, it's the electrical body part that is every cell in your body, every single one. And if your cells in your body can't hold an electrical charge for all the ions and electrons and neutrinos, neutrinos and protons and all these things to pass through your cell structure because you're a bank of water. If your body cannot hold your cells together electrically when you get sick, you might have a stroke. You might fall apart. So if you ignore the part of the human body that is being targeted with a new kind of warfare, then you find out that for 150 years the schematics have been plasmonic. How did we build the pyramids of Giza? Everything we don't know. What's a UFO? Oh, we just don't know. Well, is telepathy real? No, but artificial telepathy is real. But you have to get a brain chip or you have to be injected with graphene since 2014. No, I don't. I can just buy a cool little headset. Oh, well, then you're already connected to derp anyway. But we all are. OK, and everyone's brains explode and they all freak out and then they fall down rabbit holes. Well, I'll tell you what. I am not taking responsibility for rabbit holes in any of you fucking people out there. You're a rabbit hole. Go to the Blue Water Channel if you want to go down rabbit holes. What do I mean by that, Linda? Well, see if Linda and her dog, Truman, and then people get mad at me. Don't call people by my name. Then stop lying to people. They won't because they don't make as much money collecting coffee and podcasting. Now, on the political side, they do the same stupid shit. And I don't know why. I really don't. But that's not my business. My business is to point out the lack of a rabbit hole when it comes to you using an electrical human body part, which is the natural wireless invisible human body part, for all your internet of behaviours, internet of bodies, internet of things, industrial internet, medical body area network. And who are you? Doctors, nurses, police, medical professionals of all kinds. Including paramedics moving you back and forth and stingrays and dirt bikes, probation officers going into your veins and arteries, and everybody going, oh, oh, it's so impossible. They would tell us. And they said, no, they didn't tell you shit because you think it's a mirror. It's something other than radio frequency through the human body. Radio modulation for neuromodulation. The body itself is the Eternal Eight or 2.15.6. The biosensors are ADA 2.1, 5.4 in the wireless sensor networks for individual organs. Or nano peer to peer, brain to brain, etc. As they go to .15.5. You haven't told people that I've done this. Linda and her dog Truman are busy telling you about werewolves. And then poor Christian. 21 He's trying really hard, but he won't tell you about the biosensors inside you. The refractive index math with Moore's circle math that we're using to route computer data and electrical signals through your body. No, they tell you that. So tell me, Linda and the rest of you, how are you going to explain to people

that we have actual human teleportation with specialised concrete using not only the biosensors but the integrated photonic circuits? Yes. Are you going to talk to me about it? Probably not. What about these DNA, bio-frequency weapons that we've had on the books and around and projecting a Spartan satellite, a Corona satellite? No, it's Echelon. Oh, it's Keyhole. It's just a way of networking computers through satellites and keeping them organised. Sort of like your wireless sensor networks. Keep your internal organs organised. Okay. So when we do computer networking through the human body, the body itself becomes a node.

Duh. A.D. on a computer network. Now, most people, normal people, when you look at them and say, hey, your ass is connected to the cloud. No, it's not. They're lying. Somebody would have told us. This is what I've been dealing with all this time. So you call me a rabbit hole? A lot of people do. And then it becomes all this other craziness. And I'm sitting over here going, no, I'm going to the same textbooks, college textbooks, Cisco security books. And I'm looking at this and you're fucking lying and you won't stop. Then you deploy the cyber-physical backbone for all the synthetic telepathy, nano-peer-to-peer brain-to-brain cancer sequences, grabbing artificial neural networks, and everybody sitting here goes, hey, put your mask on. We're all going to die of Spanish flu again. I mean, that sort of thing. I don't know. But clearly it's virology and bacteria and, oh, we're all dead. There's nothing we can do. Yeah. Just sit there in your kill box. I mean, your house. And yet. No, we can't read your mind. No. We don't have an electric body part. I have no idea what a UFO is. What? I don't know. What's biomedical engineering? Look at this. This is the power of writing things down and spending your time actually figuring things out and reverse engineering them. There's no way you don't fucking know what the ups are. So you radiate people by dropping an electromagnetic field on them. Sensors. Open systems. Architecture. Modular. Open system approach. Whether it's a drone or a base frequency, it's your cable company. It's got to be up to debate. Your electric field or these bio-frequency weapons would not work so easily. So as soon as we radiate you, your psionic abilities turn on in your neurons because neurons are all over your body and telepathy, empathy, precognition, telekinesis and the rest of it. Now, that's natural for your body. You don't know that. Then you don't have anyone to talk to. If you try to tell your therapist, they'll give you drugs. And SSRIs make the radio frequency go through your body better. You have two radio frequency sinks, one over the heart and one over the bladder, multiple nodes of routing relays and other stuff for the arrow 2.15.5 wireless sensor networks. Holy shit, dude. And we haven't even finished the circle of lying to you. To you. A Oh, I don't know what our psionic abilities used to be called. Oh, I don't know. They're busy radiating you. They're extracting your neurons for neuron peer to peer. That's been going on since 1995. Then, if you're augmented too much, you turn into something like a Bigfoot. You might sprout a few extra cells, you'll disappear, you'll go

into the national parks underneath the earth, or you'll go into somebody's gated community in a city. There are the liminal spaces and the wormholes, the plasmonic schemes. More architecture we lie about with ice and high energy physics of flux density planes can disappear in the atmosphere. So again, these are jobs. And the whole goal was wireless tissue engineering got a remote control. I can now change your physical cell structure. We've got your digital optic twin and everybody's still fucking lost because nobody's admitted that you've got an electrical wireless body part. So they're logging into you and making all these changes. Changes. Physical cellular changes. That is the other part of the problem. When you scare people away from learning about basic material physics and you scare people away from learning about human anatomy, and that to me is human physiology, then you have gatekeepers like this.

Psychologists and psychiatrists. And they leave out the electrical part of the body. They don't tell you that your body is electric. They don't tell you that the aura is real. They don't tell you about neuromodulation. They don't tell you anything except pay me money and I'll tell the state whether you can have a job or not. Let your children hold your bank account. It's been like that since I was young. So there are 90 zeros, tens. And you wonder why, when they interview people under the age of 20, they're like, yeah, surveillance. Give it to us. Look at the shitty tasty mess we're all in. It sucks. Nobody can control themselves. Oh, how convenient. What do you mean? Did you tell anyone that you fucked with their heads and electrocuted them and put a new EEG overlay on their neocortex? You called it dissociative identity disorder. We had a 1,000% increase in MPD in the nineties and in the eighties. And you said nothing was happening, but you were testing brain to brain and you were doing it with the open brains of two year olds when I was tested on them. And you don't tell anyone what you're actually doing with synthetic biology, with transhumanism, with the electrical signals in the body. And you're not going to tell them that the killer robots are real, that our Marine Corps has had Osiris for years, that they can do the same thing, that they can drive little nano-sized drones through your body with their minds. Fort Benning 2022 March 2022. Oh yeah. Slaughterbots are just something on YouTube, until they're not. Welcome to your advanced signaling technology. So for all of you out there who keep asking for coffee and are very, very interested in, oh, what's a UFO? Why don't you start talking about the mirror for what it really is? Why now? We have metamaterials in the six G glow pen with the terahertz. That means that if you don't know it's a body part, you're going to be electrocuted into submission with a soft kill weapon. Because the smart grid is a weapon. Again, it's a body part. There's another element of self-defence than just, I'm going to get some shielding. I'm going to get a meter and take some readings. No, no. You can do all that. But now that you've done all that, they're still going to find ways to get through. And do you feel your own skin? That is why there are no

rabbit holes in my channel. And the people who tried to call me a lunatic have been chased away by good people who are either in the medical field or going somewhere else. It's holding up the same signs. She's using the same materials and she's saying the same fucking thing. It's a body part. If you don't tell people it's a fucking body part. They can't triage it. They can't work out what's going on because we've been lying about this body part for 150 years. No layman's language that people have conversations about at home, at the dinner table, at the water cooler, at work. Zero. And then in the last 20 years, technically 40, if you open your mouth about the right machine, the biofield healing touch, we just kill you. We being the fucking government, black projects, all these corporations and everybody knows that. Then you look at me and you go, "Oh, you couldn't just survive. You must be distant. The reason I'm still here is God, not the government. They wanted me dead. Really badly. Why? I don't know. I didn't even know my family was involved in all this fucking madness until the very last minute. And believe me, I'm not proud of it. That's why I'm out here every day trying to do what I can to bring honour back to my family. Damn. Disabled people have better things to do. Getting through the day can be a struggle sometimes. But none of you out there are going to leave. Hey, hey, hey. It's a Wide Body Area Network. Yeah. What are we going to do now? Oh, wouldn't it be nice if we could take it to the next level? Yeah. Instead of looking at me and walking away. Wow. You're all wasting time. And I don't know why. And unfortunately for you, I don't give a shit. Beyond the basics anyway. Great. Well, my main sign is that, my friend, you suck. So anyway, the main sign that I'm looking for right now is my radio frequency sync sound, so I've got another one anyway. So the reason this is important is because you cute target people out there are like, hey, we're all getting together to try and do something. Yeah, but the problem is that we've got a controlled downturn that's being implemented perfectly by the same Q economic clearance level, which is more than economic, because if you're going to control the banks, you've got to control the food, you've got to control the electricity, etcetera. Oh, OK. What do they do? Weather warfare.

This is from 12 March 2023. I don't know. I delete my videos. You'll have to get in touch with people who know where they are. Or maybe, maybe not. The reason we're doing this weather warfare has to do with changing the atmosphere, sonic plasma, shaking things up under your feet and making sure we're disrupting your cells. We're going to disassociate your electrical field, we're going to uncouple your cellular states and we're going to insert the changes that we want. So how did I work all this out? I was so mentally trying to figure out how the hell they did this through the body? Well, a long time ago I had a job. Far, far away. I worked for an internet service provider, and I also worked as a professional at the University of Wisconsin, Whitewater. So imagine my lack of surprise when I signed up for 2022. Cybersecurity. Oh, there's the corpse. The two radio frequencies

appear to be the near neighbour K-hop routing, middle mitigation and interference relays. And I'm like, holy shit. And then it said, there's your Stryker Autonomous. There's the Drone Autonomous in a machine-to-machine ad network. In other words, humans can't even decipher what it's saying. And I'm like, no way. So I keep trying to prove myself wrong, that the centre just knows what I'm up to all the time, because I'd much rather be able to tell people something halfway decent and hopeful. But if I can't, I'm not going to lie to people. Oh, here it is. So as I continue to research cybersecurity, I'm like, holy shit. 802.15.4 biosensors in 2005 commercially available to anyone who could install a light switch. Yes. Open. Shortest route through the human body first. Yes. To the heart tissue. Yep. Where the hell is everybody? Shut up, Sabrina. You can't even see the biofield in the machine writing. Oh, my God. Are you serious? Yes. That's why I said it was the aura, stupid. Because if you knew that people were electrocuting you into submission. Let me give you an example of what it was like in the past. In the nineties there were a bunch of people who said, 'Oh, you've got fibromyalgia, it's your fault. You just can't deal with pain anymore. I had a pseudotumour of the brain. In other words, a fake brain tumour. Your body acts like it has a tumour, but it doesn't. And when I tried to find out. Excuse me for a second. Transcranial magnetic stimulation to test. Oh, you have some kind of brain tumour. Your body acts like it has a tumour, but it doesn't. Pseudo-seizures. You're having seizures, but there's no reason inside you why you're having them. That wasn't my story. That was another person. All the autoimmune diseases. Well, yes. Your immune system is trying to do what it's supposed to do, but you're electrically charging it and changing it to do something else. Once the signal goes off you, your body goes back to trying to heal itself. If you don't integrate the grounding and all the other shielding and your biofield practice, you're sick as a fucking dog and you're going right along with what they want to do because they're electrocuting the circuitry of your literal cell structure. And you're still sitting there going, "Oh, I'm not connected to the club. No, my thoughts are private. No one can access me with an electrical signal. The D.O.D. leaves me out. That's crazy. Then I continued to find people going. I'm a targeted individual and I go, holy shit. How can you not know about the gig architecture? It's so unfair. So then cancer. Give it to you. Take it away in 15 minutes. Nano-diseases go back to the 1600s. This is the nineties. Where are we today? Sudden Adult Death Syndrome. It's all your fault. Fibromyalgia. All your fault. Sooner tumour, it's all your fault. Oh, we'll make it better. What do you do about the people who gave you all those opiates to make this shit go through your body easier? What shit?

Radio frequency? Nothing. What do you do with all those necessities that nobody really needed? But you needed for brain to brain? Nothing. Nothing? What about satanic ritual abuse? Oh, we don't know what you're talking about. It didn't happen. Well, then

why did the MPD increase it by 1,000% between the eighties and the nineties? Oh, we don't know. It's all your fault. And now our children think it's all our fault, too, that we've let the climate go to shit, and they'll be jumping up and down to get an injection and be in their fancy coffin apartment. Why? Parents just lie. They go to work and they lie. They don't give a fuck what happens to their kids. That's not their job. It's the school's job. Everything is reversed, turned upside down. So if I'm a parent and I give a shit, like I'm not like these other people, I care. The number one thing I want to learn right now is electronic warfare. Why is that? Because this is what the smart grid agenda 2030, the smart city initiative, the six G low personal area network, it's all about these biosensors and the body area network. Because the body is the network, the body is the node. The body is what they're using. And so I was accused of, you know, I'm not doing enough. I'm not offering solutions. I'm the one who makes my hair stand on end and encourages people to go out and feel their body part again. Because I don't give a fuck. If you're the government, you have no right to go around telling people they're crazy while you're electrocuting them. Hello. It's been you all along. Making sure no one can use their natural telepathy, empathy, precognition, telling everyone they're fucking crazy, taking drugs and then playing sims with human bodies in fucking libraries and databases. Bill, the brain-imaging library. Well, we can't read our own minds. They've read your thoughts with cognitive warfare technology at Georgetown 27. So for all of you out there who continue to fuck with me, my channel, the people on my channel, could you stop and learn, because you're done? I don't give a fuck who you are. Like they said, it will come out one way or another because they are already youth. They're very happy to see that it's all in me. Down to the bone marrow controlling everything. Show me what my brain is doing. Surveillance is fine with me because they've grown up with it and they want to upload themselves to the cloud because they're in so much physical pain, which they also do to generate certain kinds of reactions that end up medically in the body. So if I am an intelligent person and the first thing I want to know is what do I do about it? You have to get back in touch with your own body parts so that you can feel your own skin. Why? Because the biofield naturally responds to radar. That's why a lot of people can hear and feel the fucking drone before you can see it or before it shows up on the radar, especially the bigger planes, because the radar they throw down is very heavy for people who can still feel their own skin and stop telling people it's woo woo. There aren't many people who can't handle listening to her. She's really angry. Hey, I have a remote control for your ballsack. Now you're in your truck, you're going to work. I start hitting the remote, you pull over, you're vomiting. It's terrible. Maybe you start bleeding down there. I'm not kidding. Then you go to the hospital and they look at you and they think you're a fucking nutcase. Did you hurt yourself? How did that happen? Welcome to 1985, Burrows. 85. What have we got now? Not talking about it for what it is. It's a body part that's

insane. Not going up against them fell right in your face. It's a part of the body in a wide body area network. And if you can get cancer and take it away, which they've had since 1995, what are we doing? Synthetic biology. I'm not going to tell anybody, that's my honest opinion, until something else happens with hybrids. That's fair. But that's just a working theory. So if those of you who have time haven't taken the time to go to the Artificial Intelligence Symposium on the 10th of September 2020, you really should. That's where I found out about the MQ-9 Reaper being linked to every single American citizen, their DNA. And that came from the Emergent Technology College textbook of madness and this emergent technology. I told you, it's all over now. They're like, well, it's an emergent technology brain chip interface. And I'm like, you don't need a chip. We've got biosensors and I've done numerous videos on the channel to explain that these biosensors are DNA and a light derivative. They are made from your skin and your cells and your tissues. So if I'm a human being and I'm normal and I'm like, "Holy shit, dude, I didn't know any of this. Well, yeah, that's kind of the point.

The Q movement came out here to make sure that all this could go off without a hitch because the CBD CE stuff was all done underground in 2009. So what we ended up with in 2012 was machine France carrying into 2013 and a bunch of doctors and medical people and radio frequency people and Silicon Valley. We've got a commercial brain to brain interface. Two years after 2012, where's the biofuel mouth? Why we're running them in circles. Tell him that Hillary and Trump are going to fight and any veteran who might know what to do. They're busy doing puzzles, watching monkey work and believing everything we fucking tell them. Where is the body part? If they don't know it's a body part, they can't figure out how to unhook it, slow it down or stop it. Deploy the COVID shot for the cyber-physical backbone check. And it was already there in 2017, the new cyber-physical backbone. So you see, I write things down in a linear order and the synergies have seen my signs, like sometimes on the weekly, if not the daily. And guess what? Didn't change. The signs didn't change. So the synergies, the people that you're out there, wherever you're going, oh I can't handle it. Well, you better figure it out because they're probably much further along mentally in critical thinking and survival tenacity than you are. Why is that? Sometimes things are really bad and you have to see things for what they are. Occam's Razor. It's a body part. They took it for 150 years. They've lied about it, they've silenced everyone, whether it's through murder or tyranny or worse. And now here we are. And none of you are out there digging real rabbit holes about shapeshifters and Looking-Glass. Where's the spark box? Where's what Snowden did when he outed the price and the software that was attached to that spark box in the AWACS mirror. You're not helping. You're spreading more rabbit holes. So get out of the fucking rabbit holes and get into the Body Area Network. It's on Wikipedia Body Area Network. Stop being afraid and start reading. And once you do that, you can

finally start demanding intellectual accountability from the people around you who refuse to tell you what they do when they go to work every day. And once you've reached that level, you're going to fucking stand up. Why? I'm so angry. I'm 44 years old. There's no reason to keep lying to people like this, because what you're really doing is ensuring the moral revolution between parents and children in the United States. They know everything I'm talking about. They know they're biohacking and biofracking, but they have no idea that it's natural and human. So they're all going to be hooked up to a machine. Who in their right mind would want that? It's one thing if you want to be a cyborg, if you want to be hooked up to something and have injections, but to take away your choice completely. And they did that. This is the other big thing that made me angry when I got through the college textbook. The first thing was Pentagon Directive 3009, to let me know that this autonomous weapons system was put in place in 2012 and activated in 2017.

How is it that our entire military doesn't know that most of the military is autonomous? Then in late December 2021, video game controllers and on and on and on. And I'm like, oh, holy shit. So they took away your choice. That human body communication is their protocol. So you're already cyborgs. And what's worse is that with your eight or 2.1, 5.6, which is the body, the arrow, 2.1, 5.4, which are the sensors, the 82.1, 5.5, which are their individual networks. And there's no GPS anymore. It's all satellite from inside you and endogenous photonic quantum signal. Dude, you're calling me a rabbit hole. You're full of shit. Now, this is also the main reason why so many people have defended me and stayed on the channel going, "You fucking leave her alone and let her focus. It's just me and my markers. And whatever time I get, these people have irradiated their own body parts. They know what they're doing. In my now, this is just my mathematical conjecture from last Halloween. Uh huh. I think they want to take us back to the city of Earth after further research on Earth. It looks exactly like Atlantis. So can we please have those of you out there begging for money? Could you start talking about the Body Area Network and the Wide Body Area Network in the human biofield? Why do you network Wikipedia has been around since 1995. Shouldn't that be good enough? And if you still don't understand why this is a problem, google the code. Because if you've got COVID and you've been injected, you've got a special body area network to infect. December 2021, a caller to the American Journal. And here's all sorts of things we can run through you, by the way, for those of you who asked. Lion's mane is a mushroom supplement that can be very good for you because it helps regrow bone in the spine. But the cordyceps stuff and eating too much sugar and blowing that up in your body that's down here, they put that in the shots so somebody has a remote control to make you explode or turn up the voltage from the inside out. Did you like watching people being electrocuted in the electric chair? How do you like watching it on video? We've been watching it in the kitchen since last Halloween

and they're getting ready and getting ready for this Halloween. So if you don't start talking about it now, you're going to run out of time before Halloween because they're not going to wait. They're going to go ahead because nobody's going to admit anything and you're not going to admit what they've already done. You have no idea what they have in store for you. I do. I survived as a non-invasive test subject for DARPA. So show some respect. Put on your reading glasses if you need them, because I didn't do this for you. I don't want your attention. You cannot donate to me. Don't bother emailing me. There's a lot of people on the telegram. They all have their own things to do and they can answer your questions. I did this for God, Jesus Christ of Nazareth. Amen. Because when I was four years old, he tore a hole in the dimension. I saw the archangel Uriel standing next to him and he said, "There's the star, little one. It will protect you. And then he reached behind him and threw a seraphim down right next to me. And that's my guardian angel. I don't care what you believe or who you are. I really don't. It's none of my business, that's between you and God. And that's another thing with people, that they listen. I've seen a lot of different things, but the most important thing I can give you as another human being is that people deserve to know that this is a body part. You have a choice, but if you don't even know you have a choice, you have to look at your IT people and say, "What the hell is this? How do you do this? Download the synergy pdf. It's on the front of the channel or I think it's on page two and in the synergy pdf. I've also got a walkthrough up here where I tell you how to talk to your friends. That's how I built it. They're going to lie to you. Some of them will have to buy an NDA, but not all of them will have to lie that hard. As you watch how hard they lie to you, you can work out how dangerous they might be to you. In other words, do they have a remote control for your DNA in their handbag? It's no joke. Since 2015, it's only cost \$45,000 a year to remote control your loved ones. At least. I'm so sorry. I'm not a rabbit hole. Good luck out there, everyone. [00:00:00][0.0]
